

Square Geometry Dash

Thank You for buying Square Geometry Dash code from us, we hope you like our work. and feel free to contact us at any time if you need support or custom features and changes

Email : gamesap96@gmail.com

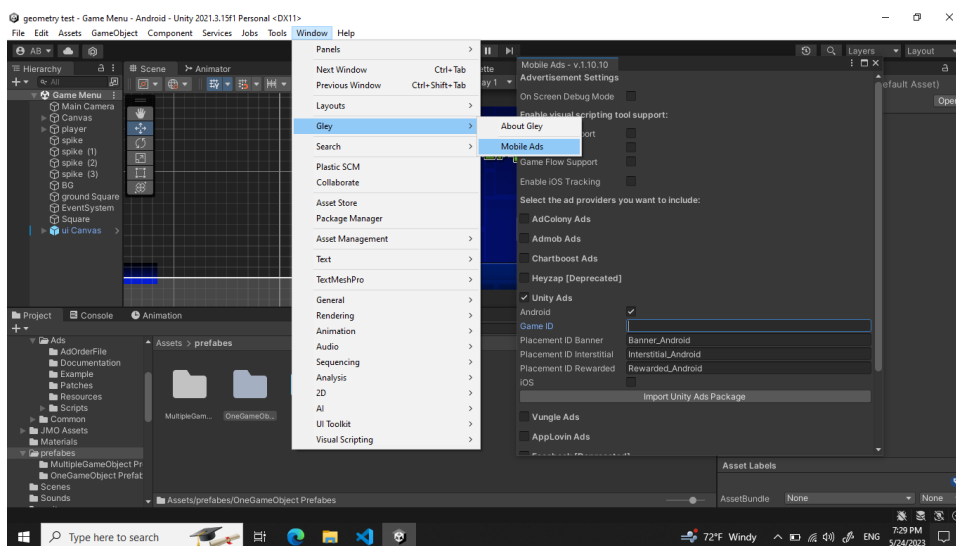

PROJECT SETUP

- Using Unity 2021.3.15.f1
- Start play at Scenes/Game Menu

HOW TO CHANGE ID ADS?

windows=> gley => mobile ads (unity ads sdk is already on the project)

Add your ids and **don't forget to press save.**

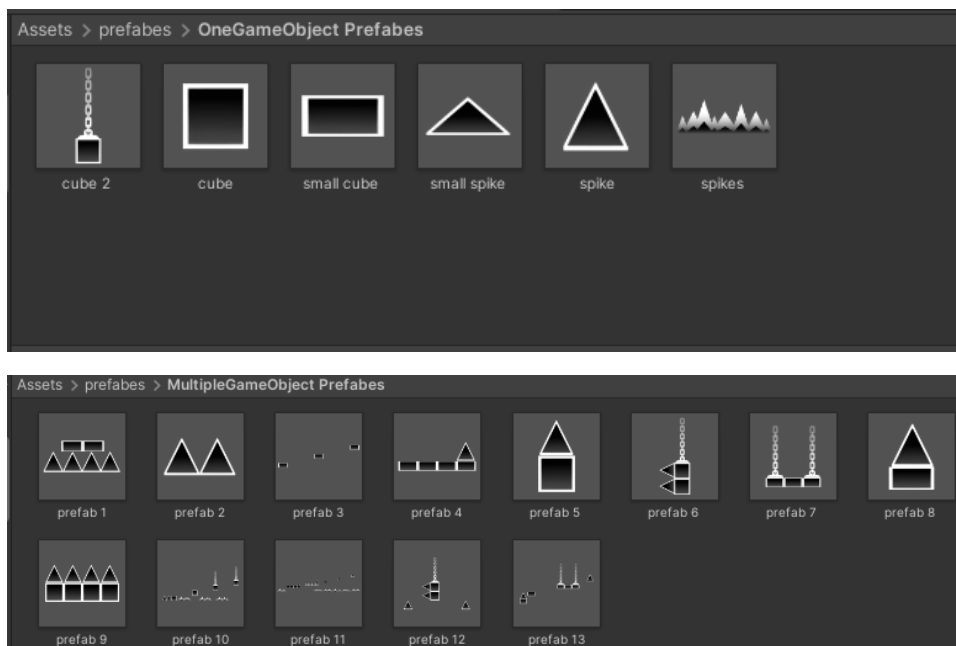

Important Things to know:

- Obstacles should have Obstacle tag.
- Any ground object should have the Ground layer.

HOW TO MAKE NEW LEVEL:

Just duplicate one of the existing levels, then drag and drop obstacles from the Prefabs folder. However, make sure to test the level to determine if it is playable or not.

Also, you can use the tilemap to paint the grounded surface. Just select the Tilemap game object and paint (Grid > Tilemap in the Hierarchy).

You can find the tile map palette in windows > 2d > tile palette.
